

## Iskanje besede

Definicija problema

Preberite dano besedilo v angleškem jeziku, kjer so uporabljeni samo male črke abecede in prestejte število določnih členov the v njem.

Vhodni podatki

Iz standardnega vhoda preberete besedilo.

Izhodni podatki

Izpišete število besedic the.

Primer

### **Vhod**

there's plenty of room at the bottom was a lecture given by physicist richard feynman at an american physical society meeting at caltech on december 29, 1959. feynman considered the possibility of direct manipulation of individual atoms as a more powerful form of synthetic chemistry than those used at the time. the talk went unnoticed and did not inspire the conceptual beginnings of the field. in the 1990s it was rediscovered and publicised as a seminal event in the field, probably to boost the history of nanotechnology with feynman's reputation.

### **Izhod**

## Napotek

Preberemo datoteko iz standardnega vhoda, izločimo prelome vrstic, in dobimo čisti seznam vrstic.

```
import sys
content = sys.stdin.readlines()
lines = [line.rstrip('\n') for line in content]
```
